Experience

Social website DEMO

This project lets users create post, and comment on post that belongs to others or of their own. Posts can only be created by users that are register to the website, in the same way post can only be deleted by its own user. It was created with react, and used Apollo for fetching queries created with graphQL, and create mutations.

Face Recognition DEMO

Website that enables users to detect faces position on images they submit, and ranks them accordingly to their number of submits.

E-Commerce DEMO

Website that displays products that can be purchased by the user, products can be added to the cart so later on can be purchased by the user when ever he likes. Displays the products individually, with a short description, and enables the user to purchase then.

Netflix clone DEMO

Website that imitates the popular app Netflix.
